

**Description:**

Auto Truck Group, a leader in the truck equipment industry since 1918 with seven locations throughout the U.S., has an opening for a **Mechanical Engineer**. This position's primary responsibility is to design and test truck mounted equipment.

This position entails analyzing, designing and testing truck mounted equipment systems. Structural and sheet metal design is a major aspect of the work. Experience with welding, sheet metal forming, mobile hydraulic or electrical circuits is an asset. Routine interaction with manufacturing, suppliers and customers should be expected. Limited travel is required.

Auto Truck offers a competitive wage and benefit package that allows motivated employees to share in the company's success including health insurance, vision coverage, 401K, and profit sharing.

Candidates should have a BSME or equivalent with AutoCad experience. Proficiency with Solidworks 3D modeler in conjunction with Cosmos FEA software helpful. Auto Truck uses a Windows based PC network across all locations. Capability with MS Word, Excel, Access, Project and Power Point a plus.

The successful candidate will need to pass a pre-employment drug test, physical, and criminal background check.
